18mm		15bar	15bar	9bar
22mm		15bar	15bar	9bar

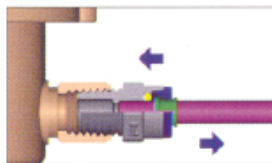

Cut the front end of the tube vertically before inserting it. The outer surface of the tube into which it is inserted shall be smooth and clean, free from scratches.

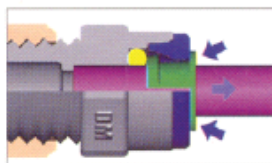

Remove impurities from the thread and wrap it with teflon tape.

Although there will be a feeling that the inserted is blocked before the tube stop is reached, insert it thoroughly to the tube stop. Use proper tools when tightening the screws.

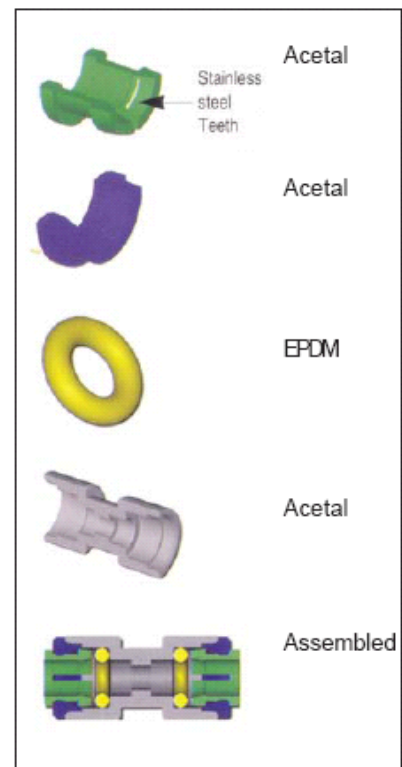

To insure the firm joint of the tube, try to pull out the tube at a suitable torque. Collets stainless steel teeth prevents the tube from being separated from the tube an o-ring prevents leakage.

Remove any clearance between the body and collets and pull the tube to remove the fitting from the tube. The fitting are reusable.

At this moment, the unique oval design of the collets facilitates the work.

This fittings is made of non-toxic, harmless materials that are approved as mentioned on the opposite page, the fittings are used as part of the water purifications, water, foods and beverage systems. It is available in a quicker, more convenient and safer manner. This ISO 9001 acknowledged system offers and maintains a very high quality standard. Defects are easily detectable and maintenance is easy with its easy dismantling for access. The unique Collets design, based on the practicalism, is being applauded by the many customers from all over the world. It can be readily used for inert gas, liquids and vacuum. It is proper for plastic and is repeatedly reusable. Also, as we have various sizes for each model, the products have a broad scope of application.
